

As for the year I was born it was 07/13/1994 I will break each digit into binary listed from the instructions above

0 = 000011
1 = 100011
3 = 110011
4 = 001011
7 = 111011
9 = 100111

With some small difficulties in getting use to the website, I decided to push the website aside and to get started in my notebook, By grabbing the decimal values of each character, then converted them into binary value. After that I converted the name chosen into HEX. With this assignment, it was a great refresher to me. I have some knowledge in this, due to my prior experience as a cryptologist in the military. I appreciate the in-depth steps on this process.
